

WULI AGRICULTURE MACHINE CO., LTD.
PROFESSIONAL PUMP MANUFACTURER

WP-140

Optimal Machining Coolant Accessory

Coolant Filtration Systems

FEATURE

- This cutting fluid filtration system improves workpiece machining accuracy.
- The drum design only takes up 1/2 space than the flat design.
- For different cutting fluids and workpieces, filter paper can be selected from 15 μ , 30 μ , 50 μ .
- For inlet, please choose a pump with working pressure of 1.5kgf/cm² and suction volume less than 100 L/Min.
- Precipitation filtration method increases the sedimentation time of chips and effectively reduces the consumption of filter paper.
- It can effectively separate chips in the cutting fluid, keep the fluid clean, and prolong the frequency of cutting fluid replacement.

Coolant Filtration Systems

WP-140

Machine Introduction & Size

unit : mm

- | | |
|---|--|
| 1. Tank: capacity 320 liters. | 6. Wheel and level adjusting screw x 4 |
| 2. Filtration ability: 140 L/Min. | 7. Overflow 2-1/2" |
| 3. High and low level switch | 8. Tank ground screw |
| 4. Electrical box and 15A earth leakage circuit breaker | 9. No paper alarm |
| 5. View window | 10. Chip Bucket |
